Custom Static Mixers

Endless Options

Custom Static Mixers

2-Component adhesive applications don't necessarily have to end at the factory designed outlet of the static mixer. Sulzer Mixpac USA's Custom Products Division focuses on modifying or adapting static mixers to meet the unique needs of its clients. Whether your application calls for the need to reach down and around, up and over, under and through, or simply a little farther away, we can provide or suggest a solution for your unique application needs. Our technicians can thread, twist, press, insert, combine or clamp just the right adapter or combination of fittings and hoses to meet your dispensing requirements.

The Luer Lock Adapter

A common solution to the problem of limited mixer endings is our versatile Luer Lock Adapter. The Luer Lock Adapter (shown at right) self-threads onto the stepped end of the static mixer. Once affixed to the mixer, an endless combination of exit channels can be produced.

Luer Lock Adapters are available in a variety of sizes to fit static mixers ranging from 5mm to 10 mm outer diameters. They attach firmly and securely to the mixer and possess a universally sized outlet on the opposing end to easily adapt to whip hoses, needles, reducers and other commonly utilized fittings.

Endless Options from Experienced Technicians

Save precious time and money. Call today and speak with our Sales Department. We'll be happy to assist you and suggest a solution to your custom mixers needs.
